

Materials in medicine

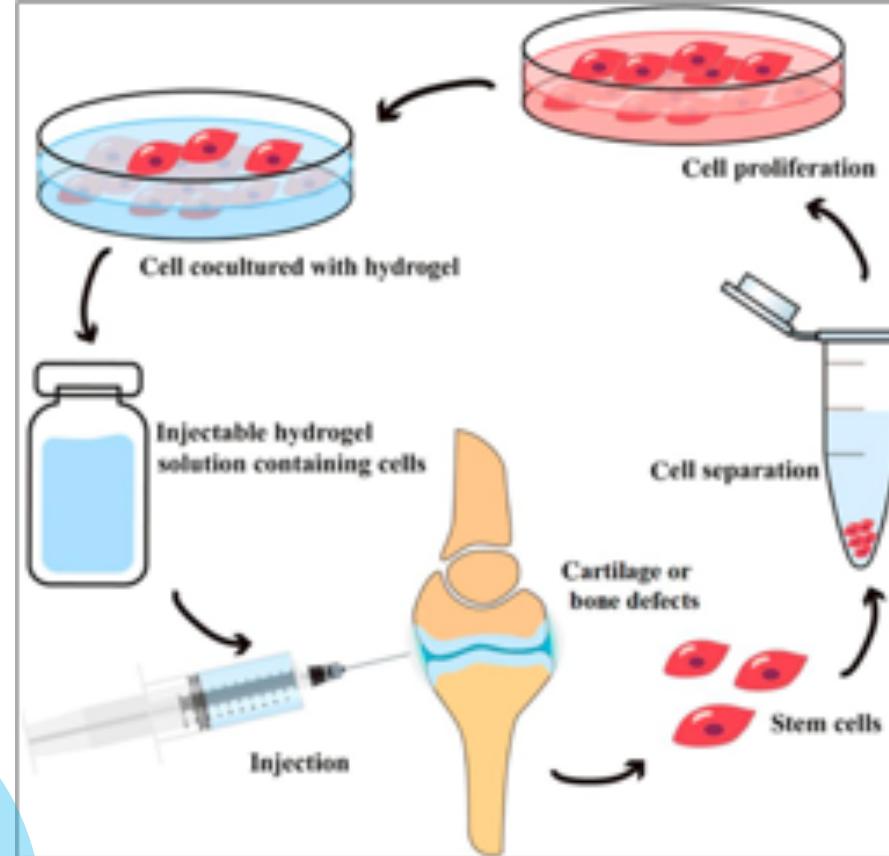

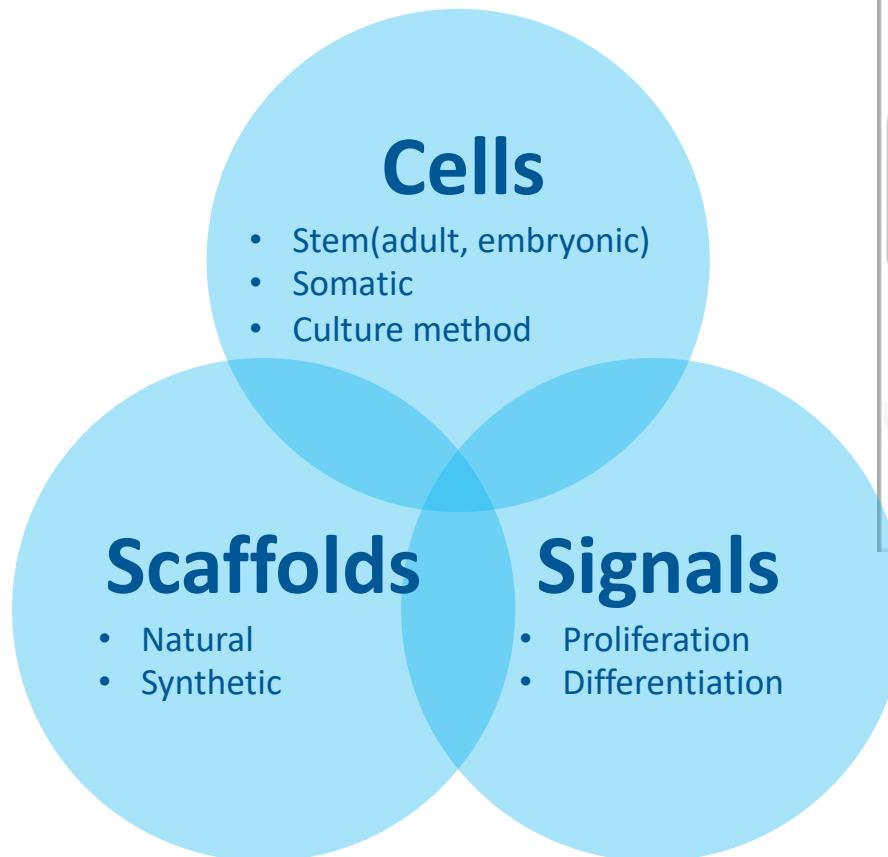

- 1. Biomimetic materials (microscopic characterization)*
- 2. Nanocarriers and Advanced cancer models*

Susana Rocha

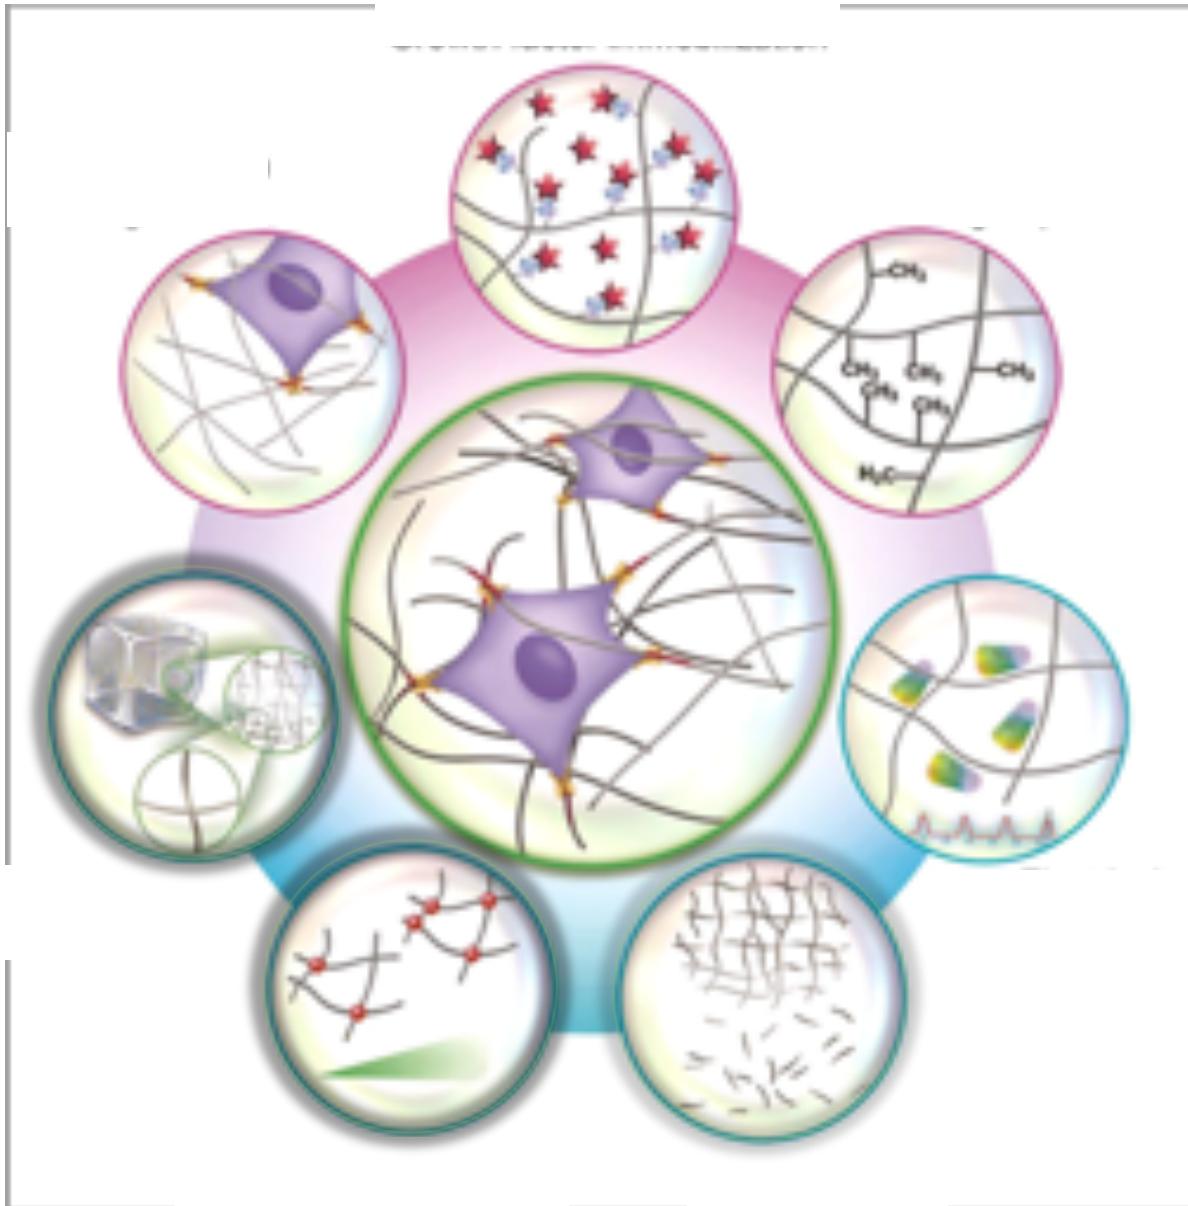

post-doctoral researcher
@ KU Leuven (BE)

Center for Nuclear Sciences and Technologies
18th June 2019

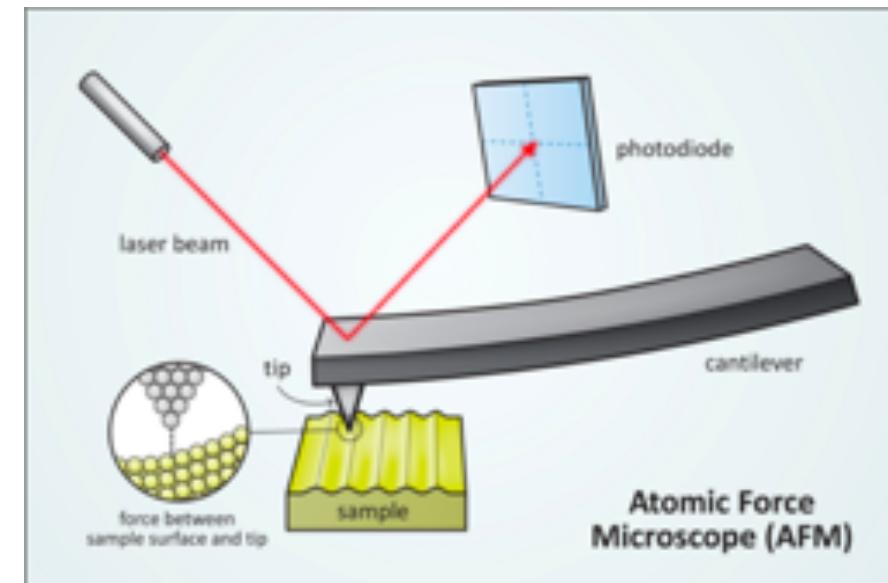

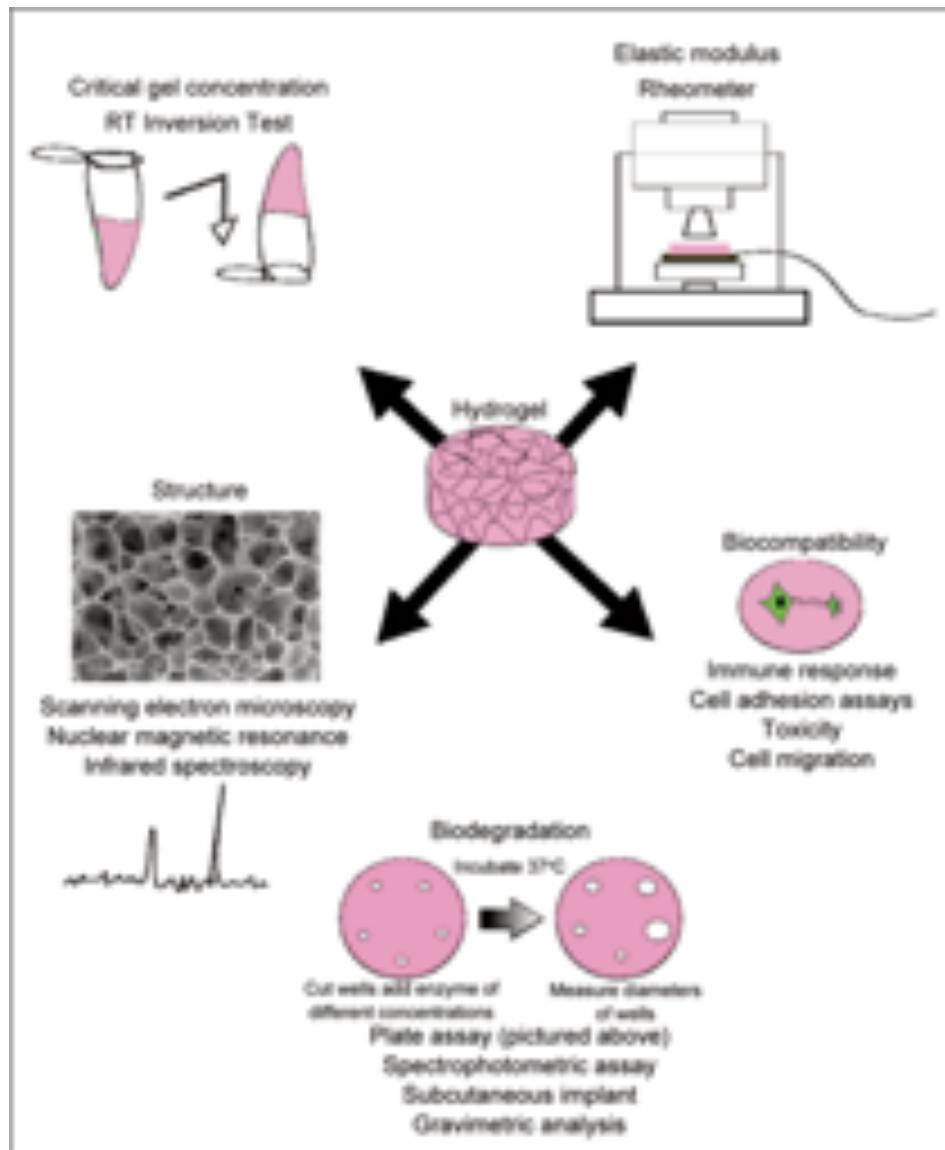

Tissue engineering and 3D cell culture

Design considerations for Biomimetic materials

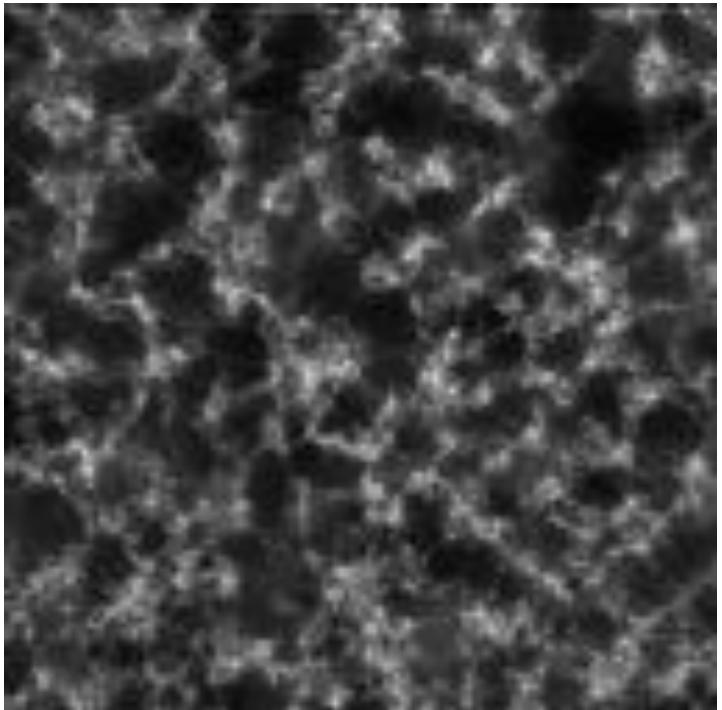

Techniques for characterization of hydrogels

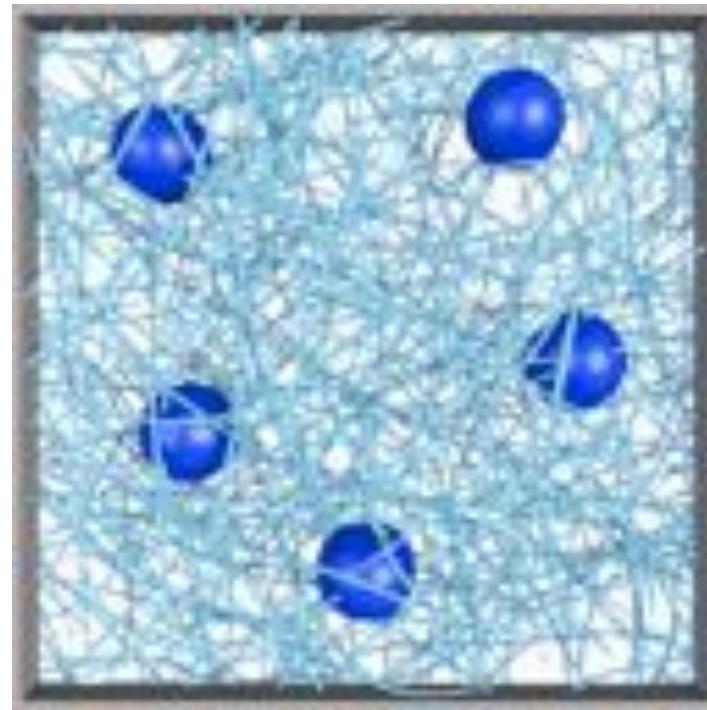

Lack of technologies that can investigate the dynamics of the mechanical and structural properties of biomaterials *in situ*, at the subcellular and molecular level

Material Characterization

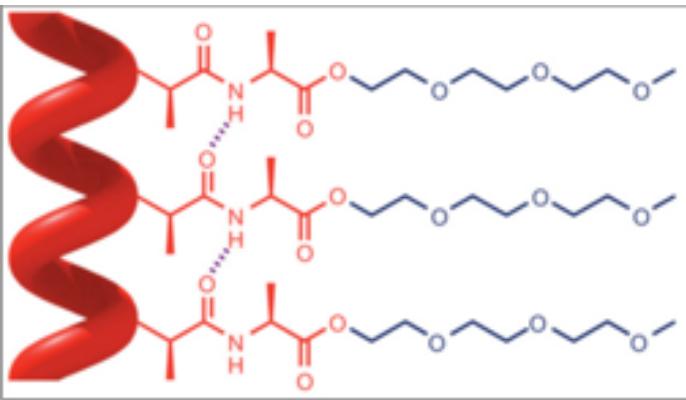

Structure using advanced fluorescence microscopy

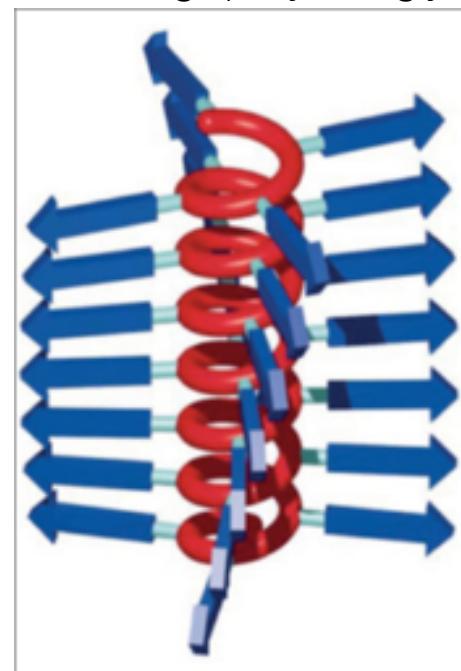

Local mechanical properties using 3D micro-rheology

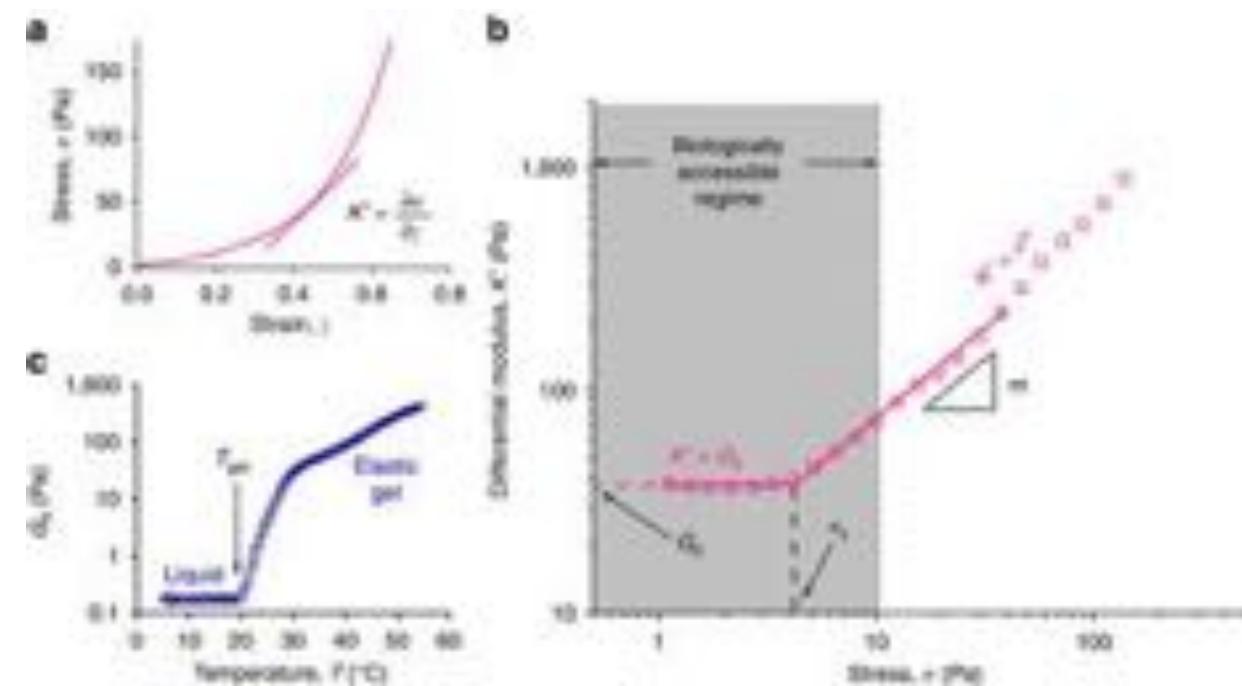

New polymer class for biomimetic 3D matrices

Polyisocyanopeptides (PICs) grafted with oligo(ethylene glycol)

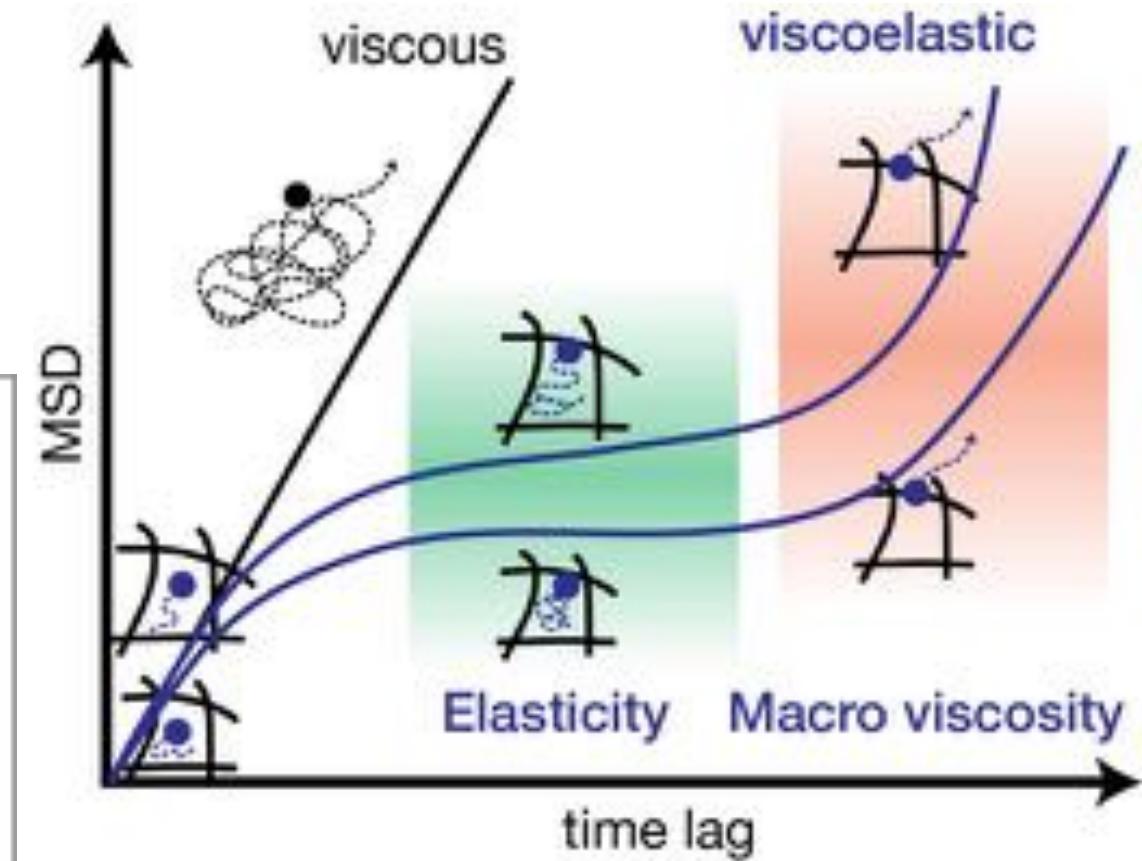

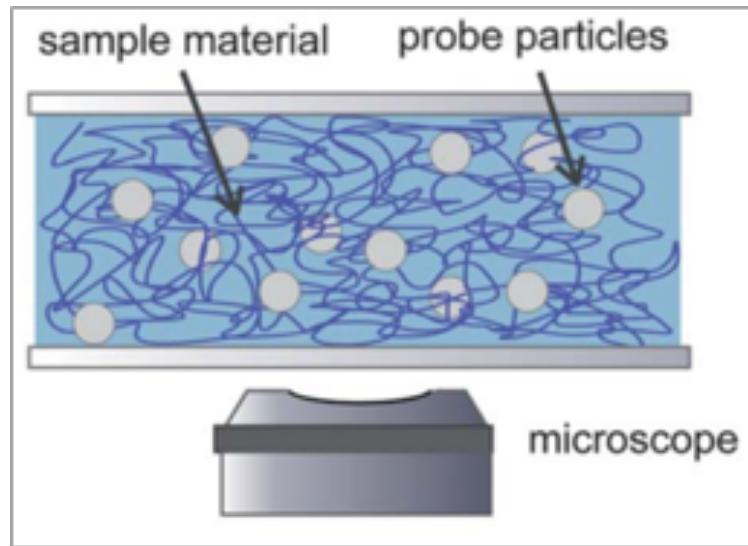

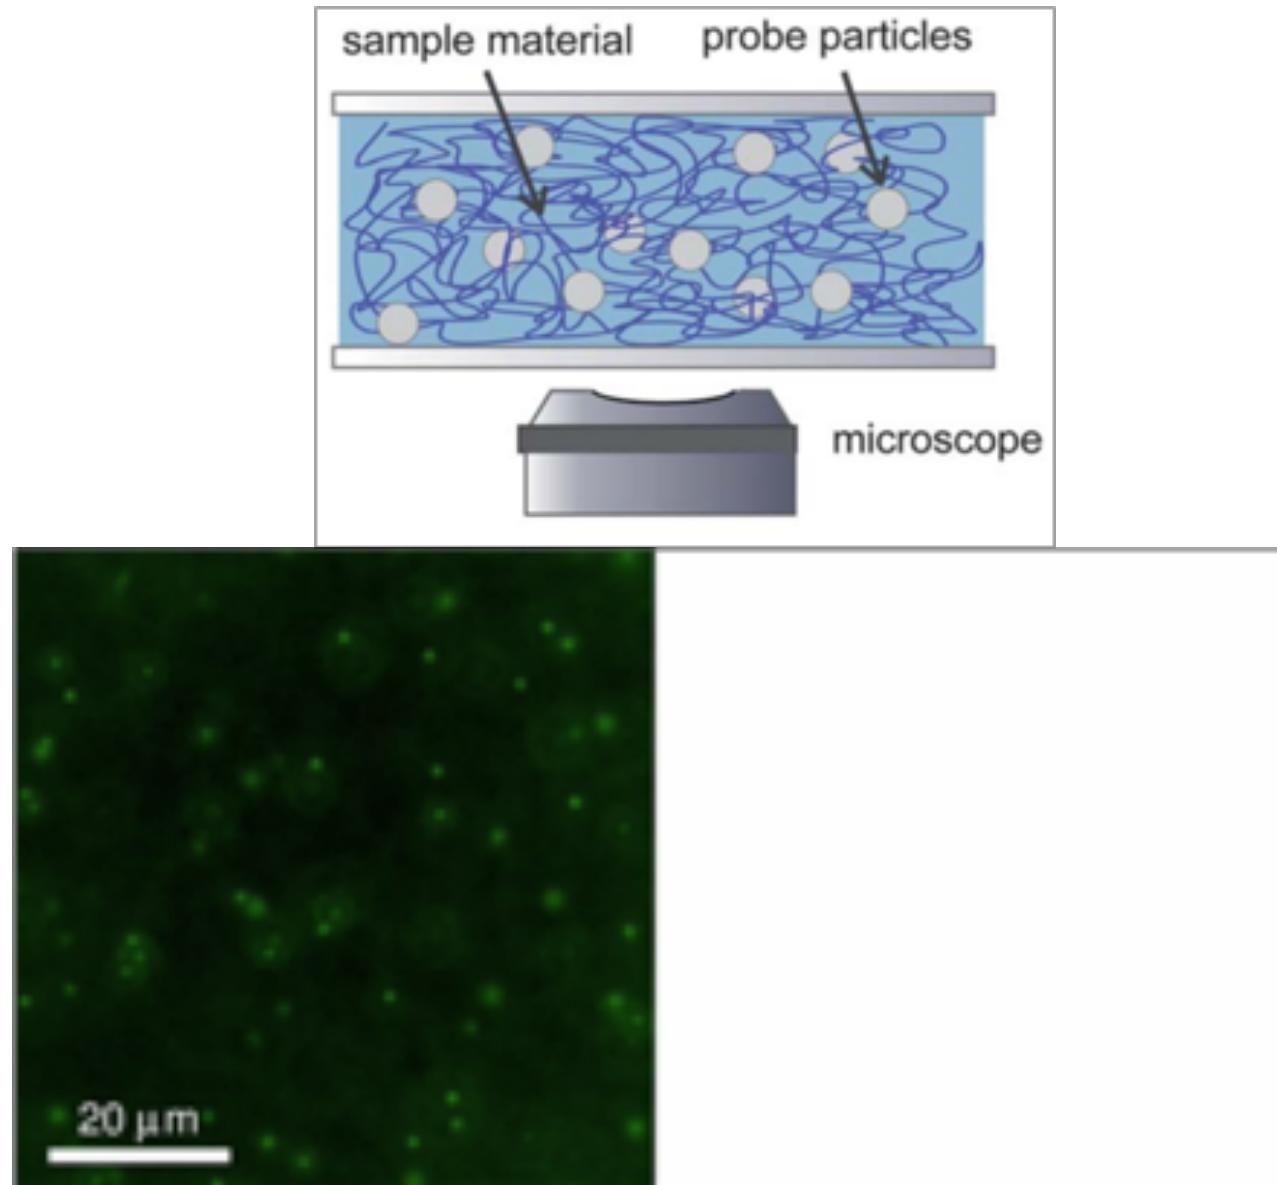

Collaboration with prof. Paul Kouwer,
Radboud University (Nijmegen, The Netherlands)

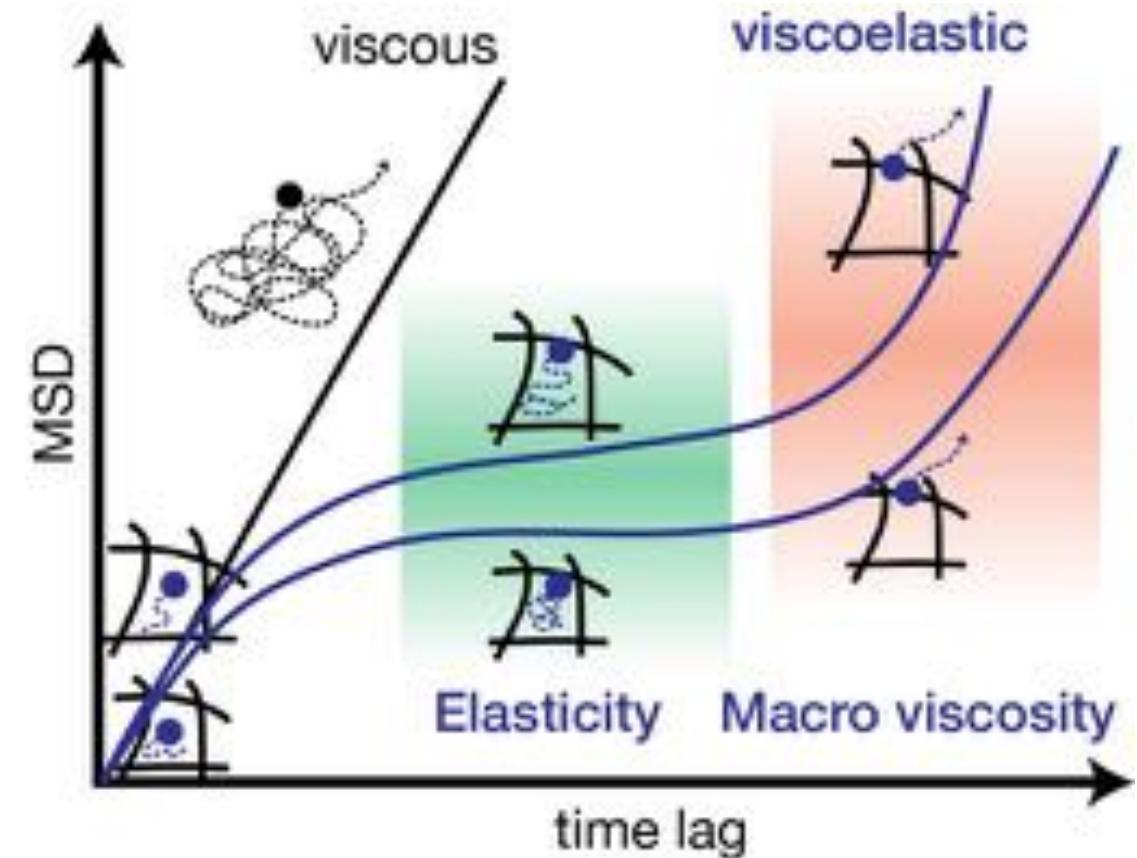

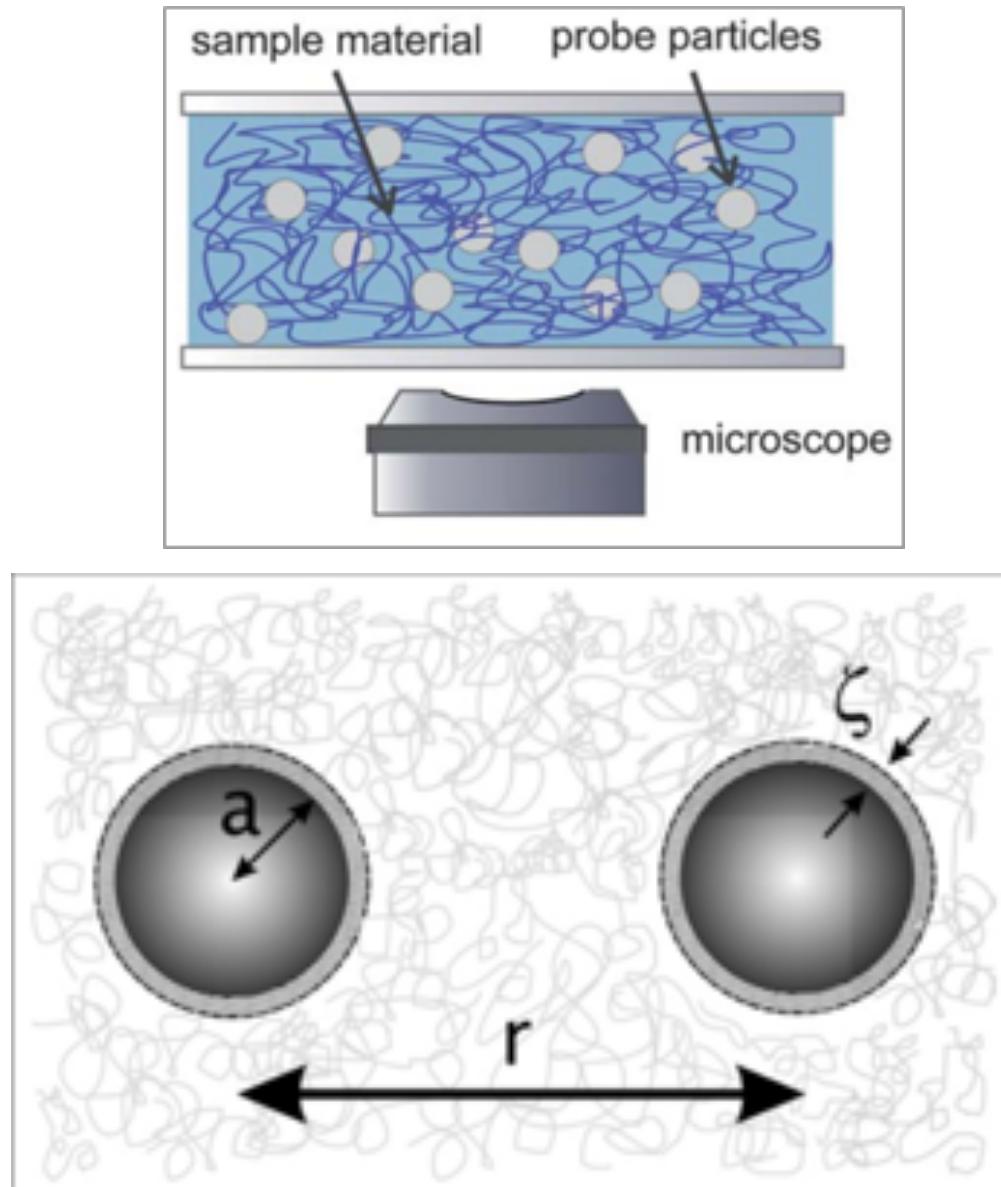

Nature, 493, 651-655 (2014), doi: 10.1038/nature11839
Nature Communications, 5, 5808 (2014), doi: 10.1038/ncomms6808

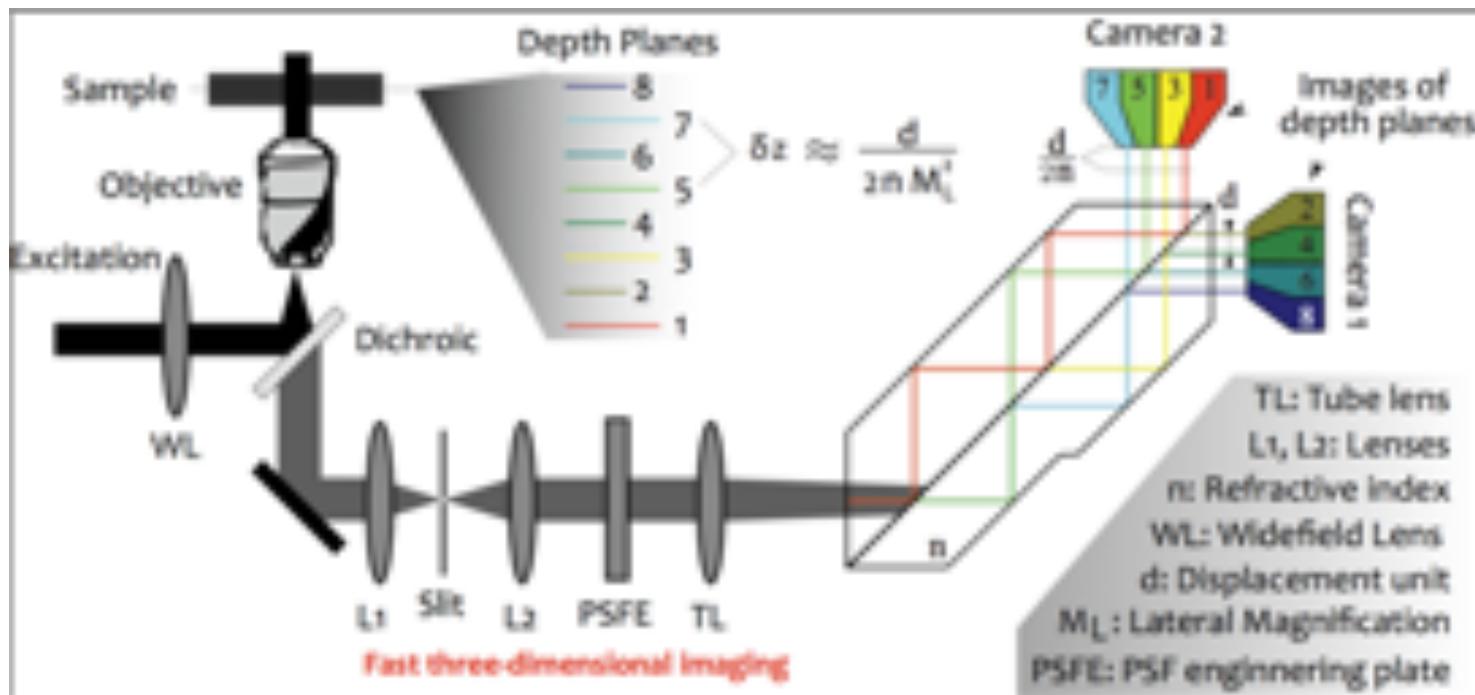

Mechanical Characterization

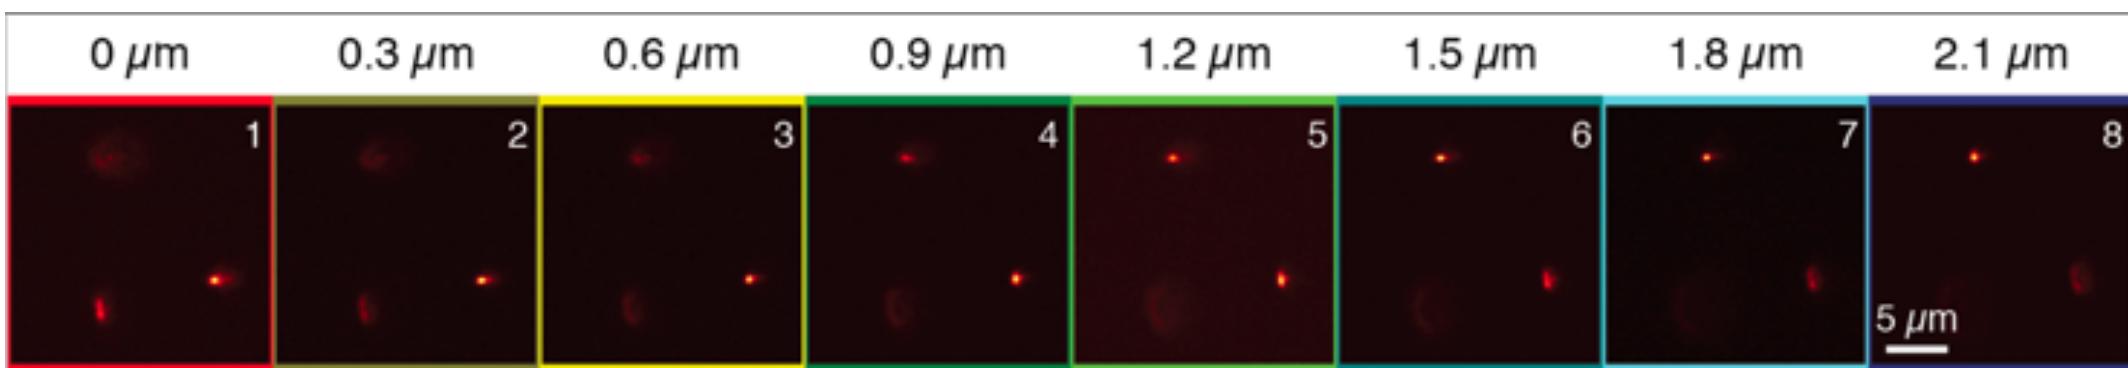

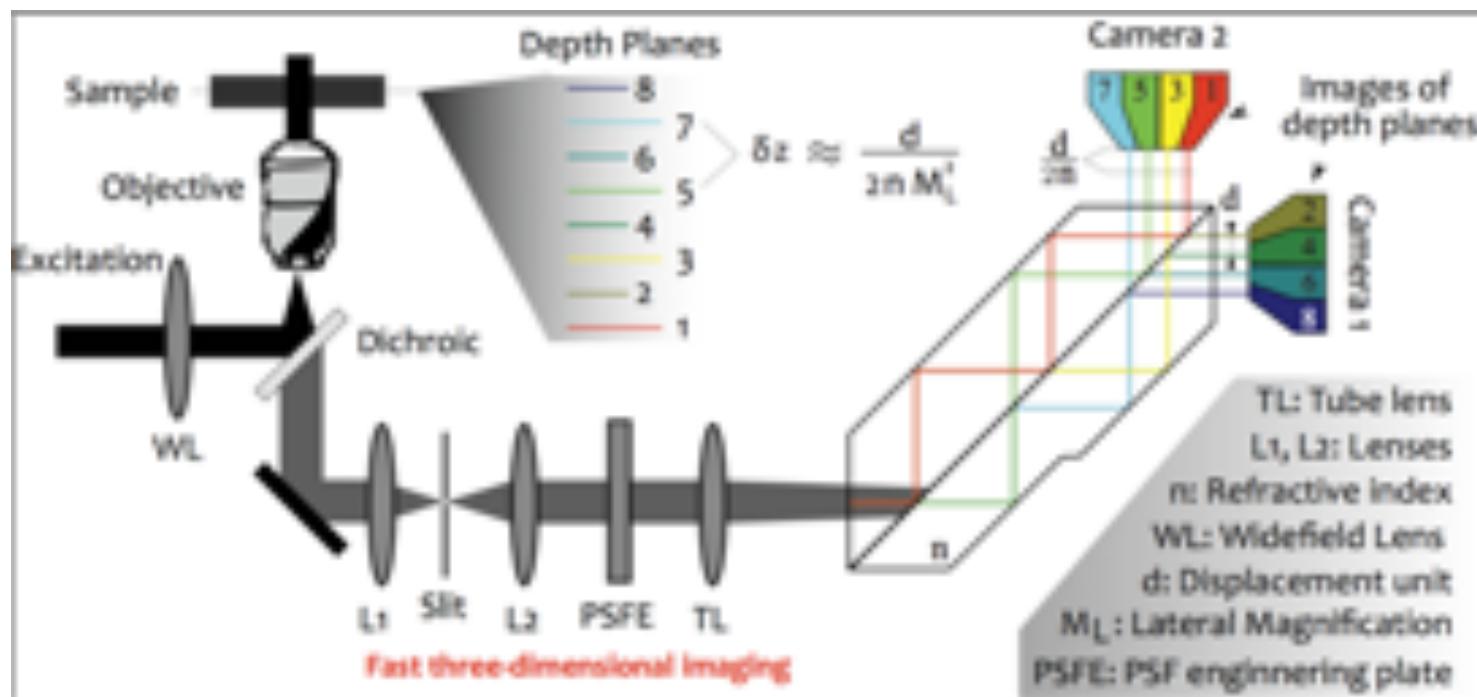

Mechanical Characterization @ the microscale

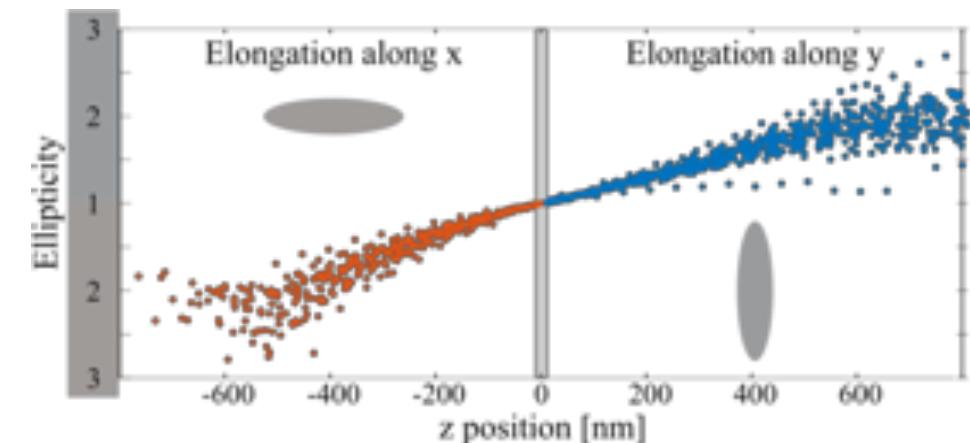

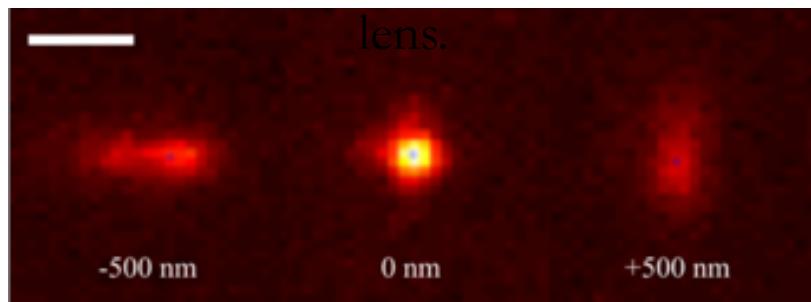

Multi-plane wide field microscope for 2-point micro-rheology

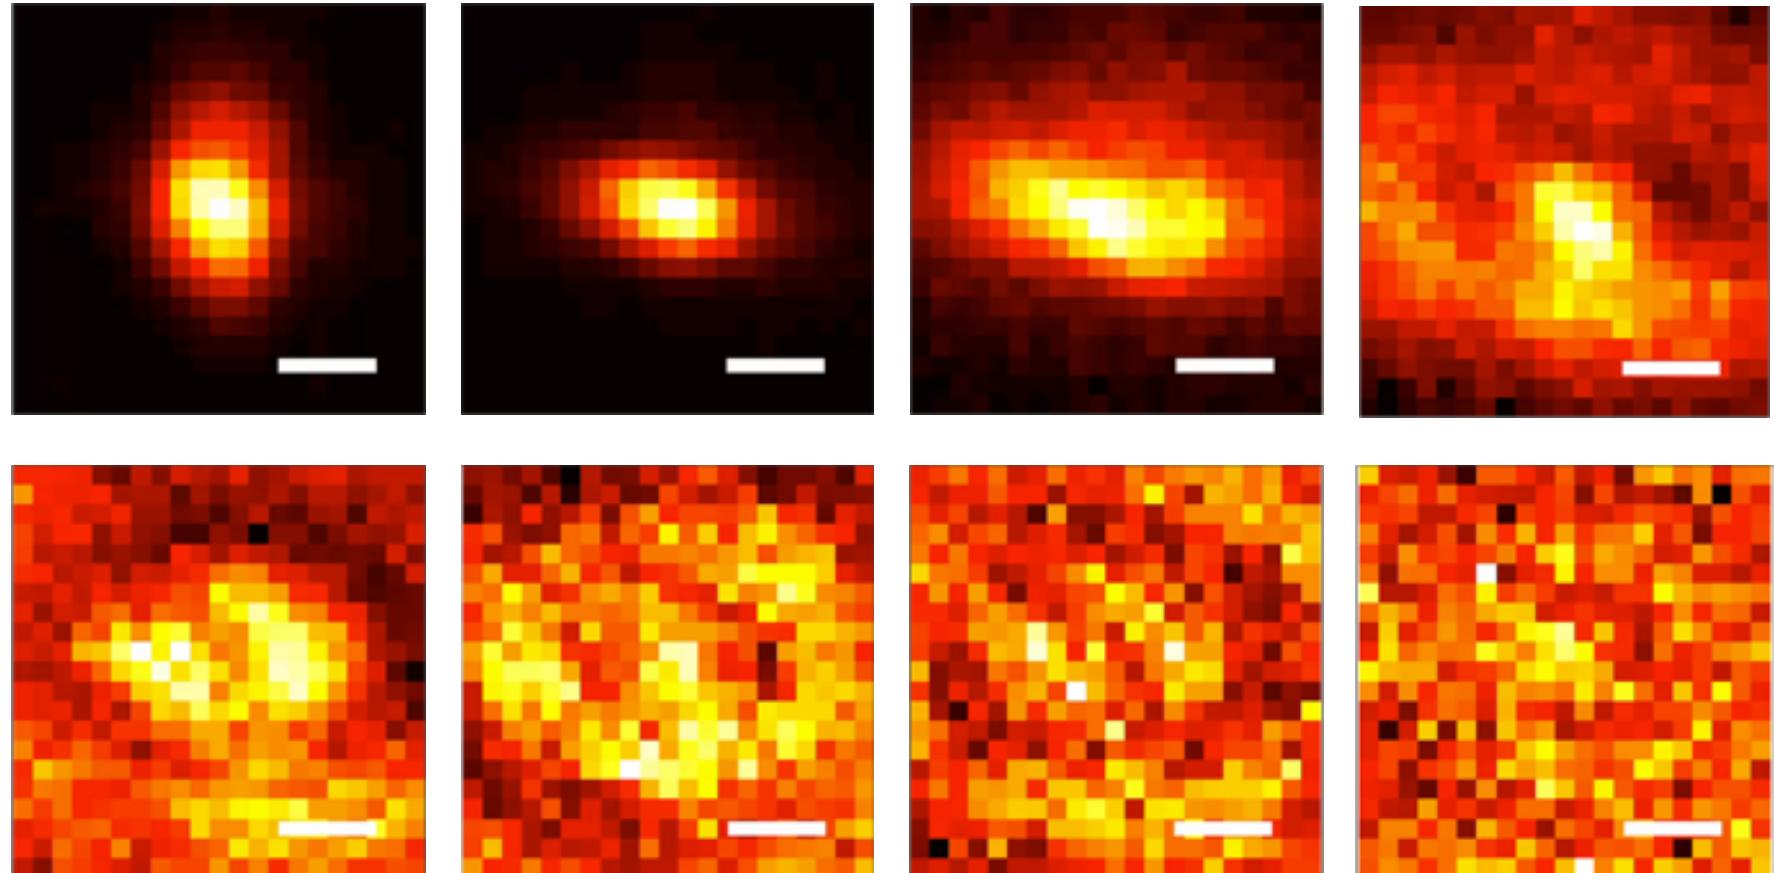

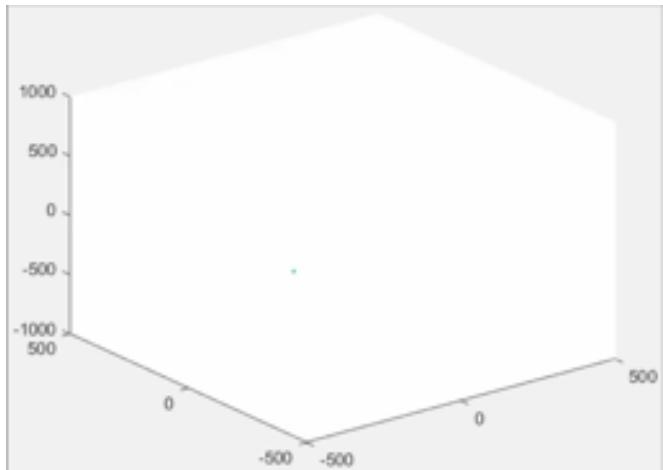

Multi-plane wide field microscope for 2-point micro-rheology

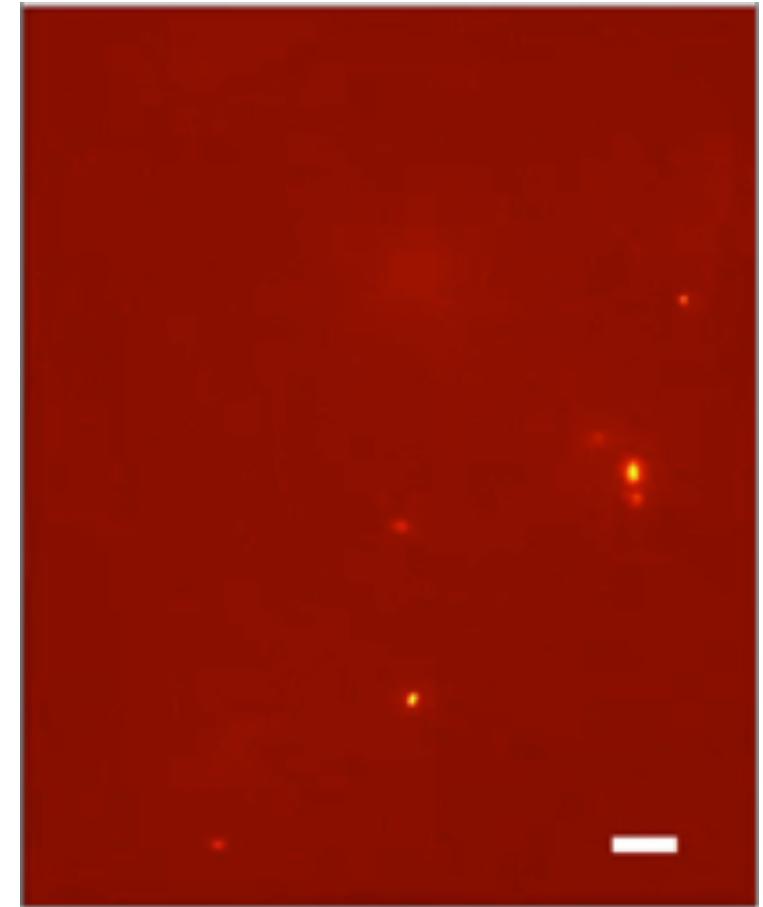

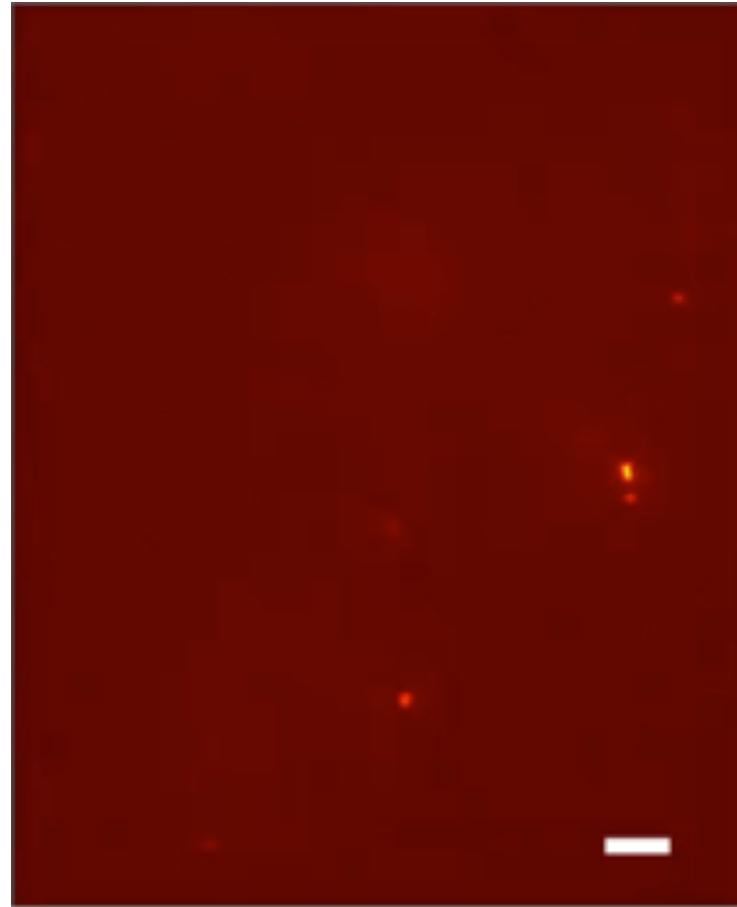

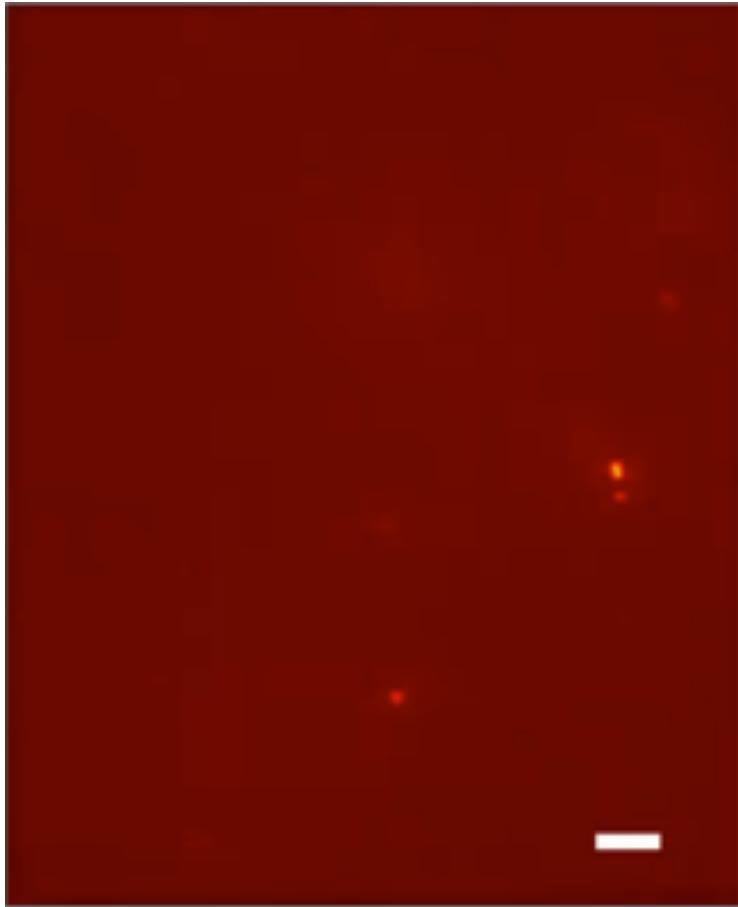

PSF engineering via cylindrical
lens.

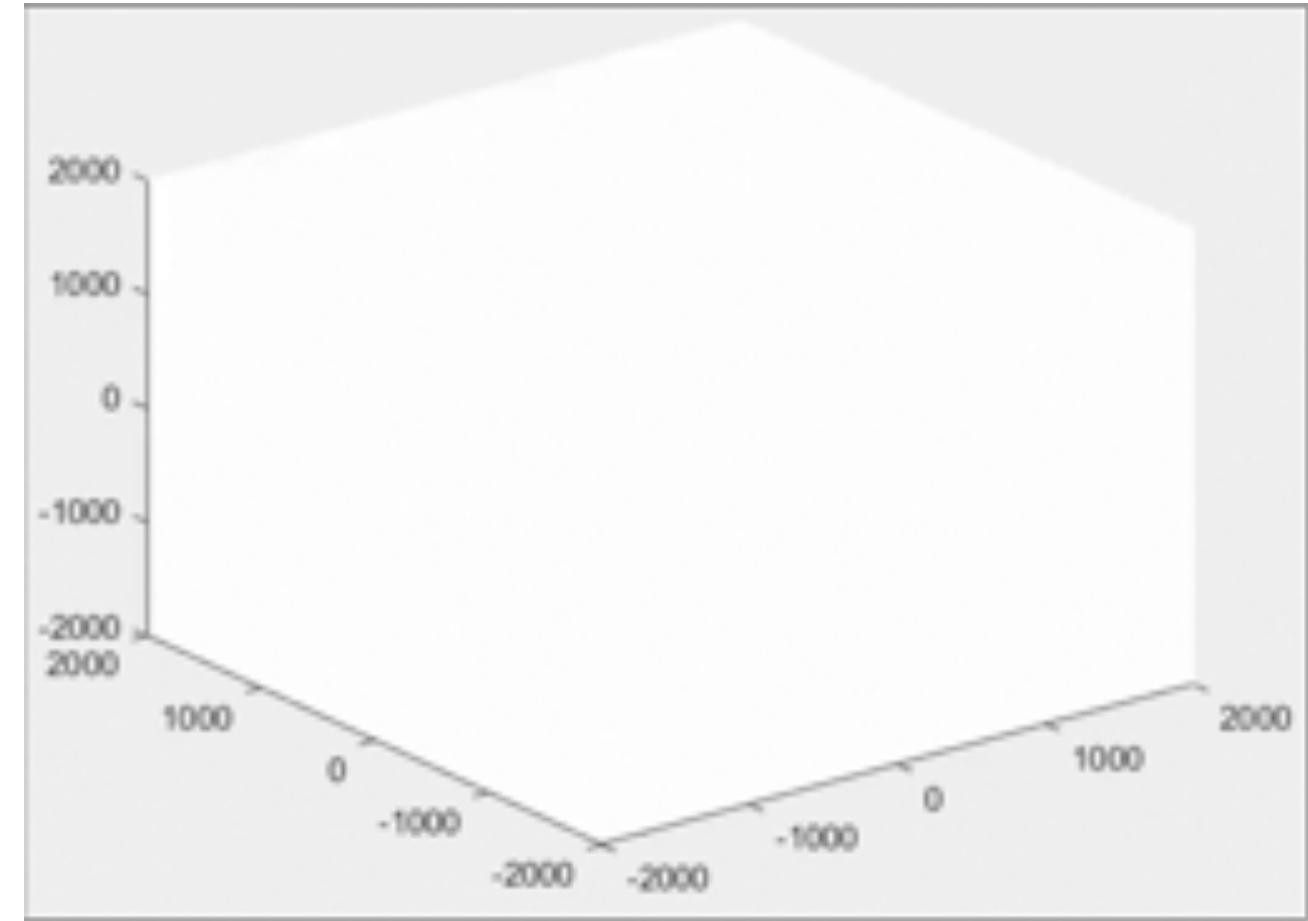

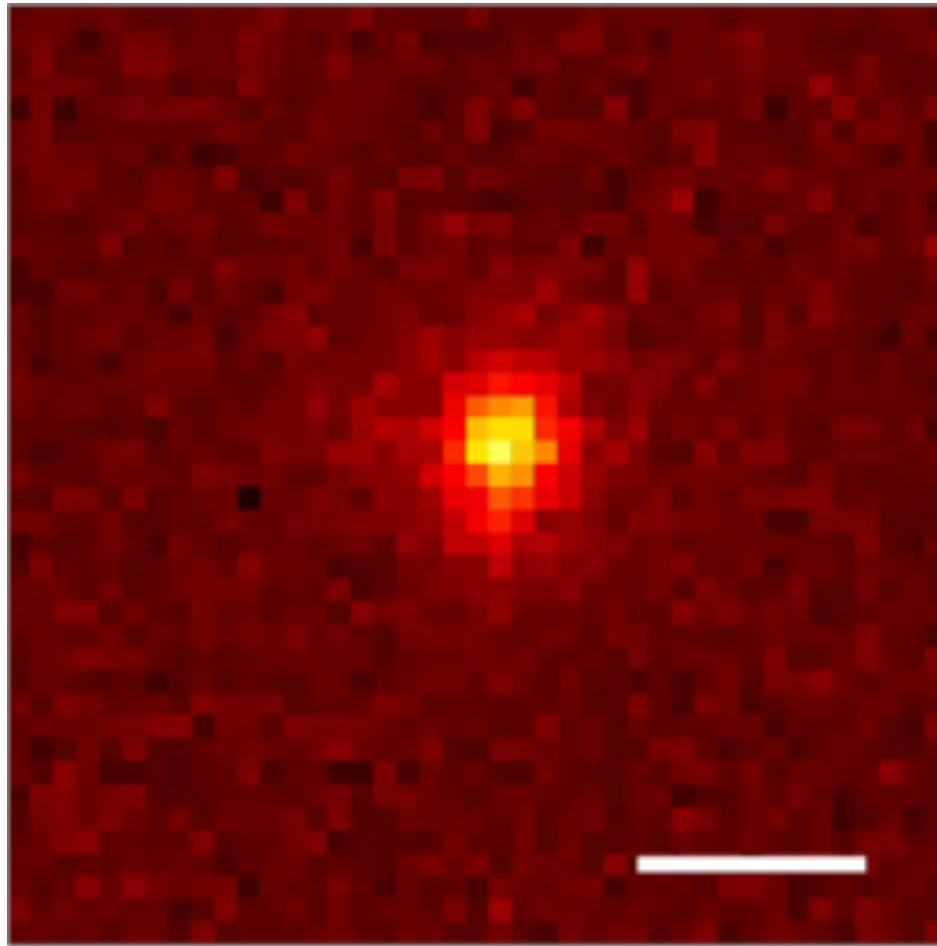

Multi-plane wide field microscope for 2-point micro-rheology

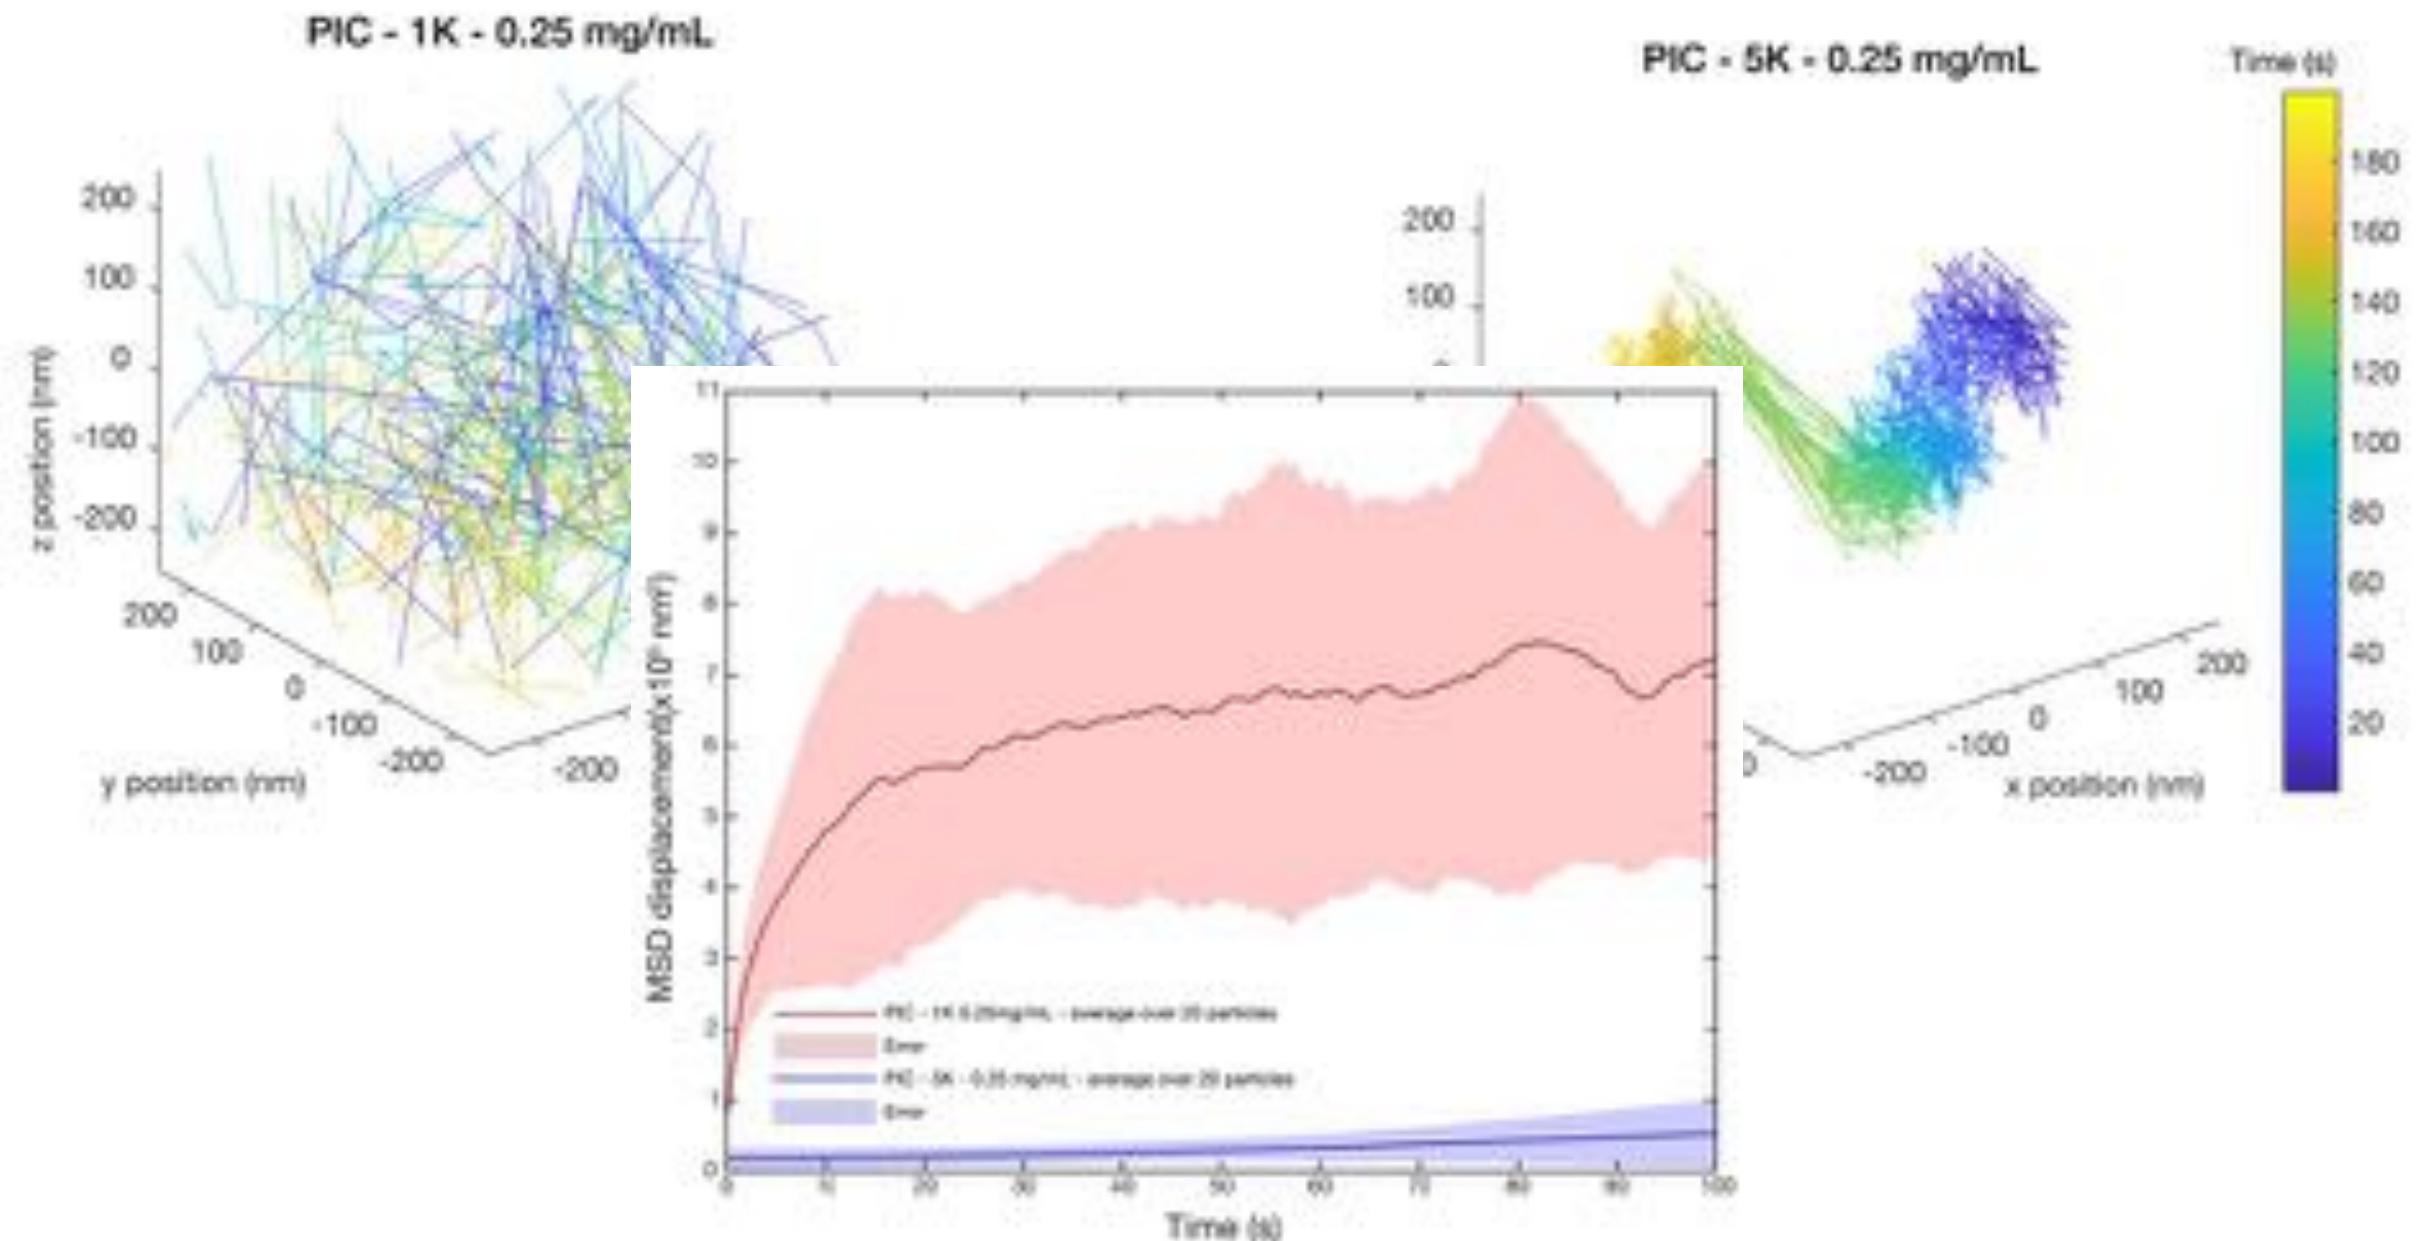

3D SPT in PIC hydrogel

3D SPT in PIC hydrogel

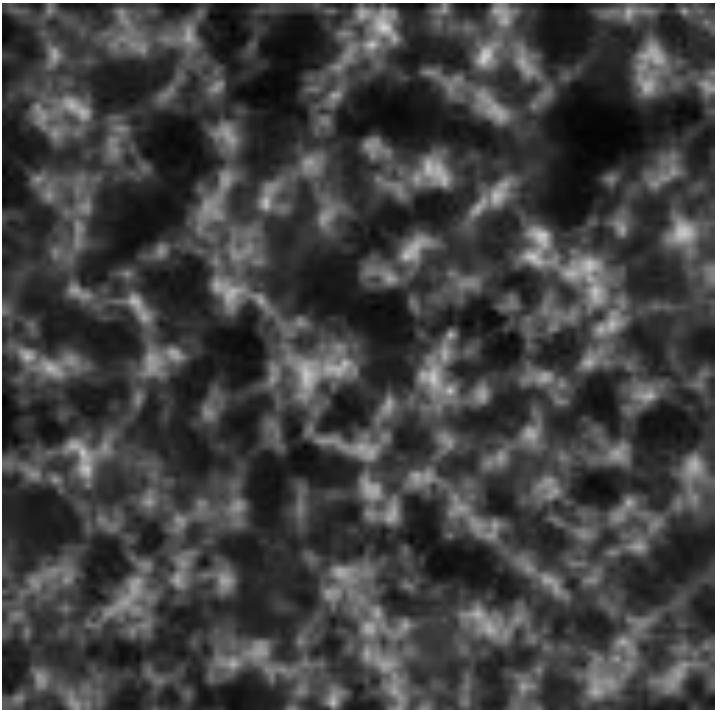

3D SPT in PIC hydrogel

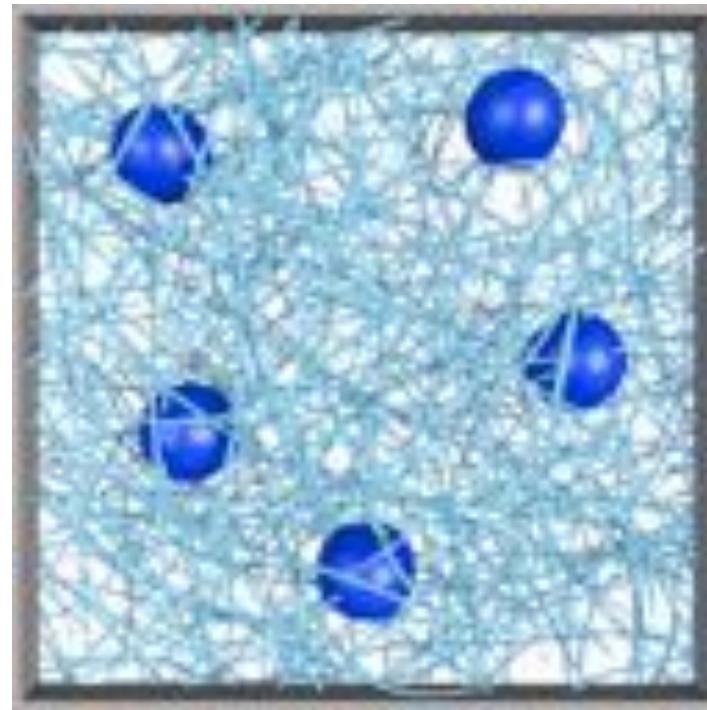

Material Characterization

Structure using advanced fluorescence microscopy

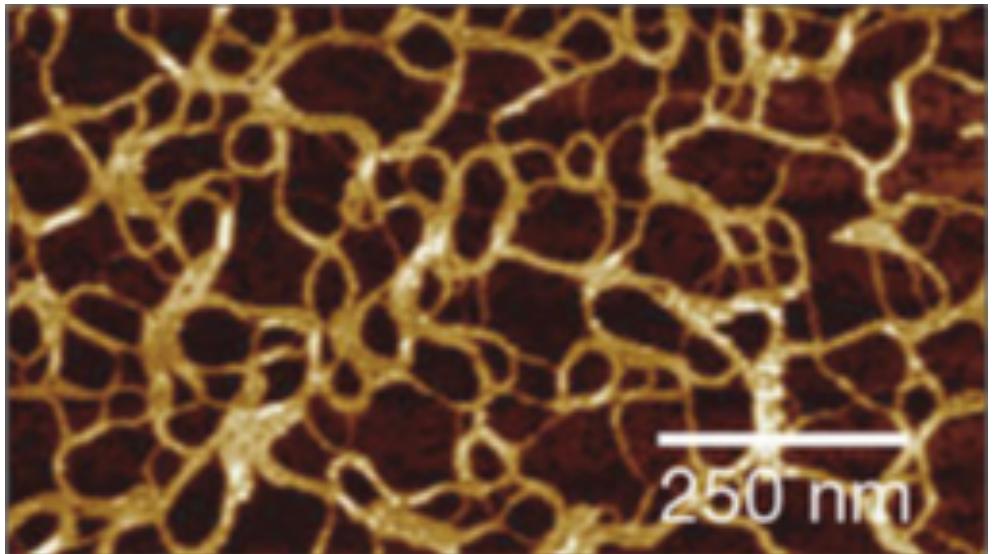

Local mechanical properties using 3D micro-rheology

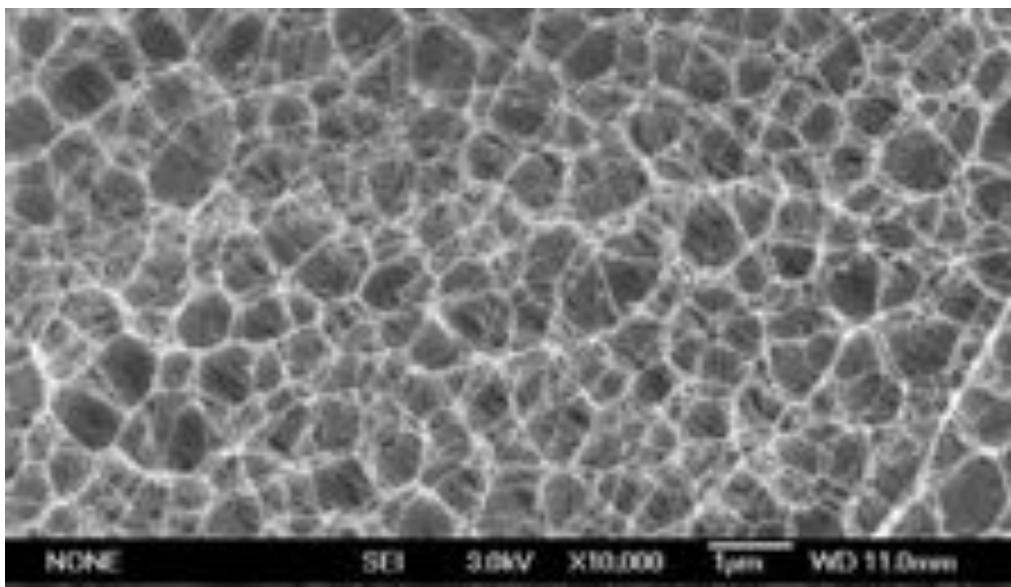

Structural Characterization of PIC-based hydrogels
